MAXIMIZE PERFORMANCE AND COMPLIANCE

DUST CONTROL SYSTEMS

A strong system begins with the application. Bosch offers the power tool industry's largest dust solution lineup under the PRO+GUARD™ line.

HIGH PRODUCTIVITY

The key component in an OSHA-compliant dust management system is a professional-grade dust extractor. Bosch dust extractors provide best-in-class CFM (cubic feet per minute) along with high suction power for maximum productivity.

AUTO FILTER CLEANING

Bosch filter technology reverses air flow every 15 seconds to keep the filter clean for longer life.

Move Toward OSHA Compliance with PRO+GUARD™ Dust Solutions

*OSHA Table 1 requires 225 CFM dust extractor for 9 In. guard.

RESPIRATION

Use of a respirator is dependent upon the application and equipment used. Respirators that filter contaminants provide a final line of defense in protecting the user.

CLEAN UP

The OSHA-compliant dust management system ends with a collection bag designed to keep the dust in the bag vs. in the canister. Bosch relies on fleece filter bags to help safeguard users from additional silica dust exposure when changing the bag.

DANGERS OF SILICA EXPOSURE

BREATHE EASIER

The Center for Construction Research and Training explains the danger of silica exposure.

WHAT IS CRYSTALLINE SILICA?

Silica, often referred to as quartz, is a common mineral. It's found in many materials common on construction sites, including soil, sand, concrete, masonry, rock, granite and landscaping materials. The dust created by cutting, grinding, drilling or otherwise disturbing these materials can contain crystalline silica particles; dust particles so small they're invisible to the naked eye. When inhaled, even in very small amounts, silica dust can cause serious health hazards. Each exposure to silica adds to lung damage.

WHAT IS SILICOSIS?

Silicosis is a disabling, irreversible and sometimes fatal lung disease. When a worker inhales crystalline silica, the lungs react by developing hard nodules and scarring around the trapped silica particles. If the nodules become too large, breathing becomes difficult and death can result. There is no cure for this disease, but it's 100% preventable.

ARE YOU AT RISK?

If you do the following to concrete, mortar, sand, rock, masonry and some paints:

- ▶ Cut or saw
- ▶ Grind
- ▶ Drill
- ▶ Jackhammer
- ▶ Crush or demolish
- ▶ Abrasive or sand blast

Then the answer is YES!

WHY IT'S DEADLY

Inhaling crystalline silica can lead to serious, sometimes fatal, illnesses including silicosis, lung cancer, tuberculosis (in those with silicosis) and chronic obstructive pulmonary disease (COPD). In addition, silica exposure has been linked to other illnesses including renal disease and other cancers. In 1996, the International Agency on Cancer (IARC), the specialized cancer agency of the World Health Organization (WHO), identified crystalline silica as a "known human carcinogen." The agency reaffirmed its position in 2009.¹ The American Thoracic Society and the American College of Occupational and Environmental Medicine also have recognized the adverse health effects of exposure to crystalline silica, including lung cancer.

OSHA SILICA STANDARD

PROTECT YOURSELF & YOUR EMPLOYEES

The Occupational Safety and Health Administration (OSHA) has issued a final rule to help curb lung cancer, silicosis, chronic obstructive pulmonary disease and kidney disease in American workers by limiting their exposure to respirable crystalline silica.

ENSURE JOBSITE COMPLIANCE

According to OSHA's website, the good news is that silicosis is 100% preventable. While using power tools with a dust attachment/accessory and dust extractors with the right filter, exposure to silica can be drastically reduced.

KEY PROVISIONS

- ▶ Reduces the permissible limit (PEL) to 50 $\mu\text{g}/\text{m}^3$ (micrograms of silica per cubic meter of air) averaged over an eight-hour day.
- ▶ Requires employers to use:
 - Engineering controls (such as water or ventilation) to limit worker exposure to respirable silica dust to the PEL
 - Provide respirators when engineering controls cannot adequately limit exposure
 - Limit worker access to high exposure areas
 - Develop a written exposure control plan
 - Train workers on silica risks and how to limit exposures
 - Provide medical exams to monitor highly exposed workers and give them information about their lung health
- ▶ Establish and implement a written exposure control plan to identify tasks that involve exposure and methods used to protect workers, including procedures to restrict access to work areas where high exposures may occur. Also, employers need to designate someone in the company to implement the written exposure control plan.
- ▶ Provides flexibility to help employers—especially small businesses—protect workers from silica exposure.

The new standard went into effect on June 23, 2016, and employers are required to comply with all obligations under the standard. OSHA enforcement dates differ by state and can be referenced by visiting <https://www.osha.gov/dcsp/osp/index.html>. If your state does not have its own state plan, OSHA federal silica regulations will apply.

DUST COLLECTION SOLUTIONS

In order to move toward compliancy and protection, it's critical that every component in the system be designed to effectively remove dust. Bosch offers the power tool industry's widest selection of dust management solutions based on application.

1. CHOOSE THE TOOL THAT BEST FITS YOUR NEEDS

TOOL

Dust collection systems are available for Bosch grinders and hammers. Dust solutions also available for hammer drills, routers, oscillators, jig saws, circular saws, miter saws, table saws, sanders and planers. Please see www.boschtools.com for more information.

2. IDENTIFY THE CORRECT ATTACHMENT THAT FITS YOUR TOOL

ATTACHMENT

Bosch dust collection attachments are custom engineered to provide maximum performance while preserving the full functionality of the tool.

3. CHOOSE A HEPA READY DUST EXTRACTOR WITH THE HIGHEST CFM AND MEETS EPA GUIDELINES

DUST EXTRACTORS

Bosch dust extractors are rated as high as 300 CFM (cubic feet per minute), with some offering features such as HEPA filtration and automatic filter cleaning.

4. DETERMINE THE RESPIRATOR FOR YOUR APPLICATION (REFER TO THE OSHA TABLE 1)*

For suggested respiratory protection and other personal protective equipment, go to 3M.com/OSHASilica

*OSHA Rule 1926.1153 Table 1

3M™ Rugged Comfort™
Half Face Respirator
6500 Series

RESPIRATION

Respirators provide protection by filtering contaminants the user breathes. If needed for the application being performed, respirators of this type include particulate respirators, that filter out airborne particles and air-purifying respirators with cartridges/canisters that filter out chemicals and gases.
